make a downloadable folder including above project

I created the downloadable **Laya Intent Router** project archive. It contains the Streamlit app, dependency list, and setup documentation.

Included

- `app.py` — Intent-routing dashboard with fixed categories, confidence thresholding, and probability charts
- `requirements.txt` — `laya` and `streamlit`
- `README.md` — Python environment setup, launch commands, model override, and safety notes
- `laya-intent-router.zip` — Complete project folder compressed for download

After extracting the archive, run:

```
python -m venv .venv
source .venv/bin/activate
pip install -r requirements.txt
streamlit run app.py
```

On Windows PowerShell, activate the environment with:

```
.venv\Scripts\Activate.ps1
```

The project defaults to `convaiinnovations/laya-typed-decisions`; you can change the checkpoint with the `LAYA_MODEL` environment variable as documented in the included README. [1] [2]
