Master AI's New Superpower: Model Context Protocol (MCP Servers)Model Context Protocol (MCP) servers are exploding...

datasciencepocket.gumroad.com

> *Model Context Protocol (MCP) servers are the hot new thing in AI-land. You've probably seen them floating around GitHub, Hugging Face, or Medium. This blog is all about using one of them — the* ***WhatsApp MCP server*** *— to connect your WhatsApp to AI tools like Claude.*
>
> *Whether you're a dev, a marketer, or just someone who's tired of typing "I'm on it!" for the 100th time today — this is for you.*

WhatsApp MCP Server tools

Function	Description
`search_contacts`	Find contacts by name or number
`list_chats`	List all chats with metadata
`get_chat`	Info about a specific chat
`list_messages`	Retrieve messages with filters
`send_message`	Send a message to a contact or group
`send_file`	Send images, videos, documents

`send_audio_message`	Send voice notes (requires `.ogg` or `ffmpeg`)
`download_media`	Download media and get the file path
`get_message_context`	See the surrounding context of a message
`get_last_interaction`	Find your last message with a contact

> It also supports sending and downloading images,videos and audio files as well

How to set up WhatsApp MCP?

This setup is divided into two parts:

1. Setting WhatsApp Bridge

Step 1: Install Go Language

- Download and install **Go** from the official website: https://go.dev/dl/
- Run the installer (`.msi` for Windows, `.pkg` for macOS, etc.).

- Verify installation by running `go version` in the terminal.

Step 2: Clone the WhatsApp MCP Repository

Run the following commands

```
git clone https://github.com/lharries/whatsapp-mcp.git
cd whatsapp-mcp/whatsapp-bridge
go run main.go
```

You should be able to see a QR code.

- Open **WhatsApp on your phone → Settings → Linked Devices → Scan QR Code.**
- Once scanned, your WhatsApp will be connected to the local system.
- If successful, you'll see: `Successfully authenticated .`

> *You should be able to see your chats on terminal !!*

Part 2: Setting Up WhatsApp MCP Using the Bridge

Step 1: Modify the Config File

- Locate the **MCP config file** (usually `config.json` or `claude_config.json`).

```
{
  "mcpServers": {
    "whatsapp": {
      "command": "{{PATH_TO_UV}}", // full path to uv
      "args": [
        "--directory",
        "{{PATH_TO_SRC}}/whatsapp-mcp/whatsapp-mcp-server", // absolute path to
```

```
        "run",
        "main.py"
      ]
    }
  }
}
```

For me, uv

You can install UV using

```
pip install uv
```

Step 2: Restart Claude AI

- Open **Task Manager** (Ctrl + Shift + Esc).
- End all **Claude AI-related processes.**
- Relaunch **Claude AI.**

> *You should be able to see WhatsApp MCP server tools under the hammer sign*

Business Use Cases (Real Money-Maker Stuff)

Here's how businesses are already using WhatsApp MCP for serious productivity:

- **Customer Support Automation:** AI chatbots on WhatsApp 24/7 = happy customers.
- **Order Notifications:** "Your package has shipped!" — automatic and on-time.
- **Appointment Reminders:** Say goodbye to missed meetings.

- **Feedback Collection:** Collect post-service ratings or suggestions.
- **Marketing Campaigns:** Broadcast promos and announcements at scale.
- **Internal Team Updates:** Task alerts, meeting pings, and project nudges.
- **Lead Qualification:** Filter leads via smart chatbots before passing them to sales.
- **Event Management:** Registration, reminders, and live updates via chat.
- **Inventory Alerts:** Auto-notify your team when stock is low.
- **Payment Confirmations:** Instantly confirm orders and transactions.

Thanks to lharries git repo for the server
